Transforming rail network safety through equipment safety & compliance management on a modern SaaS platform

Vetting and qualifying the third-party companies you rely on to perform work is important for managing risk. But what about the equipment they bring to your sites? Does it work properly? Has it been serviced regularly? Is it the right plant for the job? Answering these questions and continuously managing equipment-level data is challenging but critical to protecting your company from costly incidents. aquipa's Plant Management solution was built to make best practice safety and maintenance processes easy to implement for both internal and suppliers' equipment.

Increased Visibility

Get unprecedented, granular visibility into the plants suppliers use to perform work at your sites. Our cloud-based technology gives your entire organization anywhere, anytime access to make informed decisions in the field or in the office.

Greater Efficiency

No matter the complexity of your supply chain, our configurable platform accelerates your plant registration, compliance, and management processes. Put equipment to use faster with easy-to-create requirements and intuitive task completion for suppliers.

Reduced Risk

Protect your property and the people working at your sites by ensuring only properly functioning equipment is allowed to perform work. Our platform takes the guesswork out of the hiring process by providing the detailed information you need to properly manage risk.

Reduced Downtime

Proactive management of compliance and service maintenance reduces the likelihood of delays caused by faulty or incorrect equipment. Ensure the right plants are ready for use before they arrive to your site and get a better return on your outsourcing investment.

How it works

1

Client defines compliance attributes required for specific types of equipment.

2

Supplier registers plants and uploads supporting compliance documentation.

3

Both client and supplier use the platform to continuously manage their equipment.

Features

Configurable Requirements

Set compliance requirements on your terms. Registration forms and questionnaires are configurable and dynamic so only equipment specific information is requested.

Service Schedules

See historical and scheduled services to ensure supplier plants are properly maintained. Both suppliers and clients get automatic alerts when scheduled services are approaching.

Compliance Tracking

Full visibility into plant compliance includes completed tasks, pre-start checklists, inspections, and maintenance. In-app discussion threads provide efficient compliance resolution.

In-App Equipment Reader

Use QR codes, serial numbers, registration stickers, bar codes, and proximity beacons to identify plants, view compliance status, and perform inspections from any mobile device.

Assessments & Inspections

In-house or third-party inspectors can be assigned to conduct equipment inspections. All related tasks, checklists, and discussions can be managed within the platform for efficient completion.

Configurable Dashboards

Whether you are managing in-house plants, third-party equipment, or both, aquipa's platform provides full visibility so you can hone in on high-priority tasks.
